

why wait til june?

diy cut-and-fold iphone

(actual size)

instructions:

1. fold on dotted lines.
2. cut outline and slits (carefully!).
3. fold, tuck, and tape.

tips:

- trace the dotted lines with a pen and ruler for straight clean folds—scoring lightly with an upside down exacto also works great.
- use a ruler.
- exactos work better than scissors.
- cut cardboard to fit inside for added stability
- feel free to hack/modify/tweak.
- recycle your waste.
- be a good person.
- remember—this paper iphone does not actually function.
